DATE MAILED: 07/21/2003

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/930,847

Applicant(s)

SHIH, PO-SHENG

Examiner

Monica Lewis

Art Unit

2822

-- Th MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 06 June 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 15-20 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 15-20 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 14 August 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) _____
- 4) ☐ Interview Summary (PTO-413) Paper No(s) _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____

DETAILED ACTION

1. This action is in response to the request for continued examination filed June 6, 2003.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 15 and 16 are rejected under 35 U.S.C. 103(a) as obvious over Applicant's Prior Art Drawings in view of Wu (U.S. Patent No. 5,977,561) and Cho et al. (U.S. Patent No. 5,578,838).

In regards to claim 15, Applicant's Prior Art Drawings disclose the following:

- a) an insulating substrate (100) (For Example: See Figure 1b);
- b) a polysilicon layer over the substrate (104) (For Example: See Figure 1b); and
- c) a gate structure over the polysilicon layer, wherein the gate structure includes a gate layer (108), a gate dielectric layer (106) between the gate layer and the polysilicon layer (For Example: See Figure 1b).

In regards to claim 15, Applicant's Prior Art Drawings fails to disclose the following:

- a) a spacer on each side of the gate layer, wherein the spacer with respect to a surface of the gate layer and a surface of the polysilicon layer forms a contrast surface.

However, Wu discloses a semiconductor device that has a spacer (24) on each side (For Example: See Figure 7). It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the semiconductor device of Applicant's Prior Art

Art Unit: 2822

Drawings to include a spacer as disclosed in Wu because it aids in isolating the gate, source and drain regions (For Example: See Figure 7).

Additionally, since Applicant's Prior Art Drawings and Wu are both from the same field of endeavor, the purpose disclosed by Wu would have been recognized in the pertinent art of Applicant's Prior Art Drawings.

b) a selective conductive layer serves as a source/drain region.

However, Cho et al. ("Cho") discloses a semiconductor device that has a conductive layer (14) that functions as a source/drain region (For Example: See Figure 4 and Column 4 Lines 53-55). It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the semiconductor device of Applicant's Prior Art Drawings to include a conductive layer as disclosed in Cho because it aids in providing a connection among the layers (For Example: See Figure 4, Column 3 Lines 3-15 and Column 4 Lines 53-55).

Finally, since Applicant's Prior Art Drawings and Cho are both from the same field of endeavor, the purpose disclosed by Cho would have been recognized in the pertinent art of Applicant's Prior Art Drawings.

In regards to claim 16, Applicant's Prior Art Drawings disclose the following:

a) the polysilicon layer has a thickness between about 250A to 350A (For Example: See Page 2 Lines 11-12).

Additionally, the applicant has not established the critical nature of "the polysilicon layer has a thickness between about 250A to 350A." "The law is replete with cases in which the difference between the claimed invention and the prior art is some range or other variable within the claims. . . . In such a situation, the applicant must show that the particular range is critical,

Art Unit: 2822

generally by showing that the claimed range achieves unexpected results relative to the prior art range.” *In re Woodruff*, 919 F.2d 1575, 16 USPQ2d 1934 (Fed. Cir.1990).

4. Claim 17 is rejected under 35 U.S.C. 103(a) as obvious over Applicant’s Prior Art Drawings in view of Wu (U.S. Patent No. 5,977,561), Cho et al. (U.S. Patent No. 5,578,838) and Kawachi et al. (U.S. Patent No. 6,104,040).

In regards to claim 17, Applicant’s Prior Art Drawings fails to disclose the following:

a) the conductive layer includes an in-situ doped silicon-germanium (SiGe) layer.

However, Kawachi et al. (“Kawachi”) discloses a semiconductor device that has a thin film transistor with a SiGe conductive layer (For Example: See Column 2 Lines 51-55 and Column 7 Lines 22-28). It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the semiconductor device of Applicant’s Prior Art Drawings to include a SiGe layer as disclosed in Kawachi because it aids in lowering the threshold voltage (For Example: See Column 7 Lines 22-28).

Additionally, since Applicant’s Prior Art Drawings and Kawachi are both from the same field of endeavor, the purpose disclosed by Kawachi would have been recognized in the pertinent art of Applicant’s Prior Art Drawings.

5. Claims 18 and 19 are rejected under 35 U.S.C. 103(a) as obvious over Applicant’s Prior Art Drawings in view of Wu (U.S. Patent No. 5,977,561), Cho et al. (U.S. Patent No. 5,578,838) and Nakajima et al. (U.S. Patent No. 6,118,140).

In regards to claim 18, Applicant’s Prior Art Drawings fails to disclose the following:

a) the conductive layer is tungsten.

Art Unit: 2822

However, Nakajima et al. ("Nakajima") discloses a semiconductor device that has conductive layer of tungsten (For Example: See Column 19 Lines 4-10). It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the semiconductor device of Applicant's Prior Art Drawings to include a tungsten layer as disclosed in Nakajima because it aids in providing a connection among the layers (For Example: See Figure 29).

Additionally, since Applicant's Prior Art Drawings and Nakajima are both from the same field of endeavor, the purpose disclosed by Nakajima would have been recognized in the pertinent art of Applicant's Prior Art Drawings.

In regards to claim 19, Applicant's Prior Art Drawings fails to disclose the following:

- a) the conductive layer is metal silicide.

However, Nakajima discloses a semiconductor device that has conductive layer of metal silicide (For Example: See Column 19 Lines 4-10). It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the semiconductor device of Applicant's Prior Art Drawings to include a metal silicide layer as disclosed in Nakajima because it aids in providing a connection among the layers (For Example: See Figure 29).

Additionally, since Applicant's Prior Art Drawings and Nakajima are both from the same field of endeavor, the purpose disclosed by Nakajima would have been recognized in the pertinent art of Applicant's Prior Art Drawings.

Art Unit: 2822

6. Claim 20 is rejected under 35 U.S.C. 103(a) as obvious over Applicant's Prior Art Drawings in view of Wu (U.S. Patent No. 5,977,561), Cho et al. (U.S. Patent No. 5,578,838) and Gardner et al. (U.S. Patent No. 5,872,376).

In regards to claim 20, Applicant's Prior Art Drawings fails to disclose the following:

a) the spacer is a tetra-ethyl-ortho-silicate (TEOS) layer.

However, Gardner et al. ("Gardner") discloses a semiconductor device that has spacer comprised of TEOS (For Example: See Column 6 Lines 54-67 and Column 7 Lines 1-3). It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the semiconductor device of Applicant's Prior Art Drawings to include a spacer layer as disclosed in Gardner because it aids in isolating the gate, source and drain regions (For Example: See Column 6 Lines 54-67 and Column 7 Lines 1-3).

Additionally, since Applicant's Prior Art Drawings and Gardner are both from the same field of endeavor, the purpose disclosed by Gardner would have been recognized in the pertinent art of Applicant's Prior Art Drawings.

Response to Arguments

7. Applicant's arguments filed June 6, 2003 have been fully considered but they are not persuasive. Applicant argues that "the prior art fails to disclose the contrast surface of the invention, which can be used to form the selective conductive layer and a part of the selective conductive layer can directly serve as the source/drain region." However, the claim states that "the spacer with respect to a surface of the gate layer and a surface of the polysilicon layer forms a contrast surface." It appears that the contrast surface is nothing more than the various surfaces of the spacer, gate layer and polysilicon layer. Applicant's Prior Art discloses a gate layer and a

Art Unit: 2822

polysilicon layer (For Example: See Figure 1b) and Wu discloses a spacer (For Example: See Figure 7). Finally, Cho et al. ("Cho") discloses a conductive layer that functions as a source and drain region (For Example: See Figure 4).

Conclusion

8. The following prior art made of record and not relied upon is considered pertinent to applicant's disclosure: a) Lin et al. (U.S. Patent No. 6,015,753) discloses self aligned silicide; b) Yang et al. (U.S. Patent No. 6,254,676) discloses a metal oxide semiconductor transistor; c) Lin et al. (U.S. Patent No. 6,316,303) discloses a MOS transistor; d) Chau et al. (U.S. Patent No. 6,326,664) discloses a transistor with ultra shallow tip; e) Ahn et al. (U.S. Patent No. 6,383,877) discloses an isolation layer; and f) Lee (U.S. Patent No. 6,406,973) discloses a semiconductor device.

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Monica Lewis whose telephone number is 703-305-3743. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Amir Zarabian can be reached on 703-308-4905. The fax phone number for the organization where this application or proceeding is assigned is 703-308-7722 for regular and after final communications. Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0956.
